

The Angelino

The angelino is an angel detector.

A ballerina, imprisoned in a music bottle, awakes and dances to a melody whenever an angel passes on the Internet, or more precisely, when the word « angel » is mentioned on Twitter.

Wired with an Arduino, the music bottle detects angels on Twitter by parsing Tweets that mention the word « angel ».

2009 - Albertine Meunier

Materials

Arduino, Servomotor, Arduino Ethernet Shield

Programming

Tobias Muthesius / Sylvie Tissot

Fabrication

Tobias Muthesius
